

ADS State Reporting

Tyler knows that state reporting is a necessary component of school reports. That's why the solution needs to be powerful and easy to use, while meeting specific-state requirements. Our ADS State Reporting Module is designed to meet those needs, automating many of the burdensome state reporting requirements.

Innovative Design

With ADS State Reporting, schools can automatically transfer data from the General Ledger system—which in turn automatically creates the State Reports Master File. Once set up, users can assign each Revenue and Expense account the proper page, line, column, and percentage of distribution.

And year-end reporting is simple:

- Automatically transfer year-to-date revenue and expense amounts from the Fund Accounting module
- All calculations are automatically performed
- Reports can be printed or downloaded as appropriate to state-provided Microsoft® Excel templates for submission

Once the first year's initial setup is complete, users only need to complete certain periodic maintenance, such as new accounts and so forth. After that, the state reports are completely automated.

Versatile Components

In addition to the year-end final reports, ADS State Reporting also produces:

- Report Codes Listing
- State Reports Worksheets
- Cell Listing by Account Number
- Cell Listing by Page Number
- Cell Listing by Page Number, Totals Only
- Verity Cell Listing

ADS State Reporting is powerful, versatile and easy to use. So when it comes to reporting requirements, ADS ensures no school is left behind.

ADS currently produces the following state reports:

- Maine MEDMS-FS
- New Hampshire DOE-25
- Vermont-SASRS
- Connecticut-ED001
- Additional state reports pending
